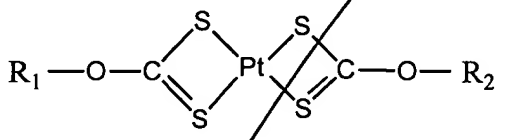
1. (Twice Amended) A pharmaceutical preparation comprising at least one compound of general formula (I)



(I)

wherein R_1 and R_2 are each independently of each other a straight-chain or branched alkyl residue having 1 to 30 carbon atoms, a straight-chain or branched alkenyl residue having 2 to 30 carbon atoms, a monocyclic or polycyclic alkyl residue having 3 to 30 carbon atoms, a monocyclic or polycyclic alkenyl residue having 4 to 30 carbon atoms, or a monocyclic or polycyclic aromatic residue having 6 to 30 carbon atoms, these residues being optionally substituted by one or several substituents.

2. The pharmaceutical preparation according to claim 1, wherein in the compound of formula (I) R_1 and R_2 are a straight-chain C_{1-14} alkyl residue or a C_{3-14} cycloalkyl residue each.

3. The pharmaceutical preparation according to claim 1, wherein in the compound of formula (I) R_1 and R_2 are CH_3CH_2 each.

4. The pharmaceutical preparation according to claim 1, wherein the compound of formula (I) is dimethylxanthogenate platinum (II) complex or diethylxanthogenate platinum (II) complex.

8. The pharmaceutical preparation according to claim 1, further comprising a pharmaceutically compatible inert carrier or a diluent.

11. (Amended) A process for the production of a pharmaceutical preparation according to claim 8, characterized in that the compound according to formula (I) is mixed with the pharmaceutically compatible inert carrier or diluent.
